SUMMARY

AI Systems Engineer specializing in Deep Learning, LLMs, Prompt Engineering, RAG, and Agentic AI, with hands-on Python, Pandas, and scikit-learn experience across the ML lifecycle. Builds scalable, production-ready software from first principles, including agentic MCP tooling, deployed ML pipelines, and clean, maintainable architecture.

EDUCATION

University of Central Punjab, Lahore

Oct 2022 – July 2026

- Bachelor of Science in Computer Science (BSCS)
- CGPA: 3.93/4.00 | Awarded 100% Merit Scholarship
- AWS Academy Graduate: Cloud Foundations (EC2, S3, Cloud Architecture), 2024

WORK EXPERIENCE

University of Central Punjab

Oct 2024 – May 2025

Teaching Assistant, Object-Oriented Programming

- Taught inheritance, polymorphism, abstraction, and design principles to undergraduate students.
- Mentored 30+ students through weekly code reviews, debugging, and 1:1 design guidance.
- Improved session content by identifying recurring design mistakes across student submissions.

PROJECTS

IMDb MCP Server

June 2026

Python, FastMCP, SQLite, Pydantic v2, Claude API, LLM Tool Integration, Prompt Engineering

[Video Demo](#)

- Built an MCP server with prompt-engineered tool workflows enabling natural-language SQL querying via Claude API, with Pydantic v2 validation and a SELECT-only guard against unsafe writes.

Tajir Demand Forecaster

Mar 2026

Python, Scikit-learn, SQL, Streamlit, AWS, ML Pipeline, Deployment

[Live Demo](#) | [GitHub Repo](#)

- Cleaned and engineered features from 9,000+ sales records using Python and Pandas, then deployed a Streamlit dashboard using Ridge Regression to generate 7-day-ahead demand forecasts, adding a live SQL analytics layer and a delivery-consolidation simulator that models fuel and CO₂ savings.

Deep Learning Model from Scratch

Jan 2026

Python, NumPy, Deep Learning, Predictive Analytics

[Github Repo](#)

- Engineered a neural network from scratch in pure NumPy to classify diabetes risk from 8 clinical indicators (CDC BRFSS2015 dataset), manually implementing forward/backward propagation and gradient descent.

Language Detector using Machine Learning

Nov 2024

Python, Flask, Scikit-learn, TensorFlow/Keras, NLP, TF-IDF

[Github Repo](#)

- Built a text-language classifier comparing Naive Bayes and a neural network (char n-gram TF-IDF features), reaching 98.57% test accuracy, and deployed it as a real-time Flask REST API.

LEADERSHIP ACTIVITIES

Founding Member, IEEE Robotics and Automation Society (RAS) Student Chapter

Oct 2024 – Oct 2025

- Co-founded the IEEE RAS Student Chapter and led its early launch, planning, and operations.
- Organized hackathons, workshops, and technical events to promote student learning and skill development.
- Supported event operations for Tech for Tomorrow (TFT) 2024, HITE 2024.

SKILLS

Technical Skills: Python, SQL, C/C++, Java, JavaScript | **ML & Data:** Deep Learning, LLMs, NLP, Scikit-learn, TensorFlow/Keras, NumPy | **Tools & Cloud:** Claude API, Claude Code, MCP (Model Context Protocol), FastMCP, Pydantic v2, AWS, Docker, Git/GitHub, Streamlit, Flask, SQLite

Language: English - Fluent, Arabic - Conversational, Urdu - Native
